

HARDWARE & SYSTEM REQUIREMENTS GUIDE

APPLICATION SERVER

HARDWARE

2 GHz 64bit Dual Core Processor
4 Gigabytes or more RAM memory
500 MBs available hard drive space for installation
5 GBs of available hard drive space for application use

NOTES

High speed hard drives (10,000 RPM+) are recommended to increase performance

SOFTWARE

Windows Server 2008 or Windows Server 2008 R2
Windows Web Server 2008 or R2 acceptable as well
Microsoft Internet Information Server (IIS) 7 or 7.5

NOTES

Application Server cannot be installed on a Windows Domain Controller Server (Active Directory Server). This exception includes Small Business Server.

LDAP Integration (optional Add-on) requires an Active Directory server or Novell server on the network.

DATABASE SERVER

2 GHz 64bit Dual Core Processor
4 Gigabytes or more RAM memory
200 MBs available hard drive space for installation
5 GBs of available hard drive space for database expansion

NOTES

A hardware RAID setup that includes failure protection is recommended for all database operations. Regular off hard drive or off server backups are recommended for protection of data.

SOFTWARE

Windows Server 2008 or Windows Server 2008 R2
Windows Web Server 2008 or R2 acceptable as well
Microsoft SQL Server 2005 or 2008
SQL Server Management Studio

NOTES

If SQL Server Express Edition is used the free Maintenance Connection database backup tool will not work.

ADDITIONAL INFORMATION

Both database and application server can be on a single server; although increased performance will be gained if run on separate servers.
